## ***Retinitis Pigmentosa Information***

*Retinitis pigmentosa (RP) describes a group of related diseases that may run in families and cause a slow but progressive loss of vision. RP affects the rods and cones of the retina, the light-sensitive nerve layer at the back of the eye, and results in a decline in vision in both eyes. RP usually affects both eyes equally with severity ranging from no visual problems in some families to blindness at birth in others.*

*The earliest symptom of retinitis pigmentosa, usually noticed in childhood, is night blindness or difficulty with night vision. People with normal vision adjust to the dark quickly, but people with night blindness adjust very slowly or not at all. A loss of side vision, or tunnel vision, is also common as RP progresses. Unfortunately, the combination of night blindness and the loss of peripheral vision can be severe and lead to legal blindness in many people.*

*While there is a pattern of inheritance for RP, 40% of RP patients have no known previous family history. Learning more about RP in your family can help you and your ophthalmologist predict how RP will affect you.*

*Usher's syndrome, in which a person is both deaf and blind, can be associated with RP. The incidence of Usher's syndrome is difficult to determine but surveys of patients suggest up to 10% of RP patients are hearing impaired. The incidence of Usher's syndrome is three cases per 100,000. It is the most frequent*

*cause of combined deaf-blindness in adults.*

*Considerable research is being done to find the hereditary cause of RP. As hereditary defects are discovered it may be possible to develop treatments to prevent progression of the disease. While developments are on the horizon, particularly in the area of genetic research, there is currently no cure for retinitis pigmentosa. RP can be passed from generation to generation. The genetic transmission of RP is not the same for every family. Your Ophthalmologist can help assess the risk of passing RP to your children. Genetic counseling is also available.*

*Nutritional supplements may have an effect on RP. It has been reported that Vitamin A can slow the progression of RP. Large doses of Vitamin A can be harmful to the body and supplements of Vitamin E alone may make RP worse. Vitamin E is not harmful if taken with Vitamin A or in the presence of a normal diet. Your ophthalmologist can advise you about the risks and benefits of Vitamin A and how much you can safely take.*

*Despite visual impairment, people with RP can maintain active and rewarding lives through the wide variety of rehabilitative services that are available today. Until there is a cure, periodic examinations by your ophthalmologist will keep you informed of legitimate scientific discoveries as they develop.*

Main Office:  
6655 Post Road  
Dublin, Ohio 43016

East Office:  
150 Taylor Station Road  
Columbus, Ohio 43213

Lancaster Office:  
618 Pleasantville Road  
Lancaster Ohio 43130

Mount Vernon Office:  
1355 Yauger Rd  
Mount Vernon, OH 43050

Arena Office (Eye Center):  
262 Neil Avenue  
Columbus, Ohio 43215

Chillicothe Office:  
159 E. Second Street  
Chillicothe, OH 45601
